"Stop the Unnecessary Spread of Sickness and Infection"

A Step Ahead in Next Generation Surface Disinfection

Gone are the days of the slow, ineffective, labor intensive process of wiping surfaces to disinfect.

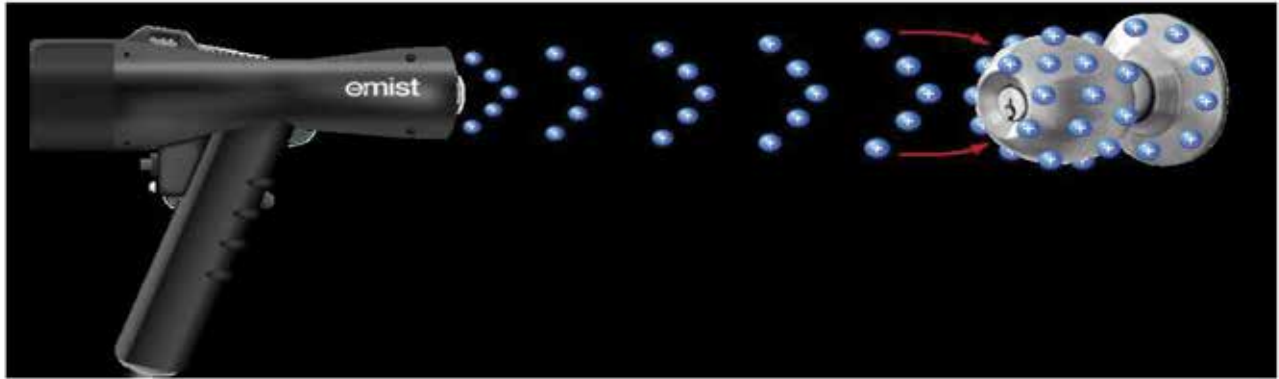

Fast • Effective • Efficient
Quite • Safe • Tested • Proven

The EMist electrostatic application technology comprehensively and efficiently applies the most advanced chemistries and liquid solutions the world has to offer to exposed touch point surfaces, thus enabling your solution to meet its advertised performance claims.

Our technology ensures exposed surfaces can be frequently and comprehensively disinfected in a fast, easy, and efficient way.

Our EM360™ system applies disinfectant solutions with its patented technology to environmental surfaces using electrostatic induction charging. The liquid droplets are positively charged by the spray system which is then driven to the surface target area in a consistent manner allowing for comprehensive uniform coverage. It is safe on sensitive equipment and treats areas untouched by traditional methodologies.

*Cleaning is **Visible**, Disinfection is **Invisible**.*

The **EM360™** was engineered for maximum mobility, speed and efficiency. It is lightweight, durable, easy to use, and maintain. It has been tested and proven to be effective and efficient for all your disinfection needs.
